3A Morning Talk – Geography

27th February, 2023 (Monday)

Presenter: Charlie Tsai & Andy Wong

C+A	Good morning principal, teachers and our fellow schoolmates. We are students from 3A.
Charlie	I'm Charlie.
Andy.	I'm Andy.
Charlie	Hey, Andy. Have you watched the international news recently?
Andy	Of course. You want to mention the earthquake that occurred in , right?
Charlie	You are smart. On 6 February 2023, an earthquake measured at the magnitude of 7.8 struck southern and central Turkey. It caused around 42,000 deaths and 100,000 injuries. The number is still rising.
Andy	Besides, 4 million buildings have been destroyed. Many people remained missing in collapsed buildings. The rescue team is still working hard on finding the loss.
Charlie	I feel sad for this natural hazard. The negative impact is huge. I am going to donate to Turkey.
Andy	Count me in. Do you feel blessed that there is no such serious natural hazard in Hong Kong, Charlie?
Charlie	Sure. However, Hong Kong is affected by typhoons in summer. Do you know why typhoons are formed during summer, but not winter?
Andy	Oh Charlie, you cannot get me there! Miss Cheng taught us during our last Geography lesson. The two favorable conditions are the warm water with surface temperature above 26.5°C over the West Pacific Ocean and an abundant supply of moist air in summer.
Charlie	Absolutely! Sigh...The heavy rain, strong wind and storm brought by typhoons cause so much inconvenience to our daily lives. I wish the Hong Kong Observatory would announce a Typhoon signal No. 8 whenever a typhoon is approaching Hong Kong!
Andy	Don't be silly. Sleep earlier tonight and get back to school on time tomorrow!
C+A	That's the end of our sharing. Thank you.
