Mobile Games

Hello everyone! Today, I'd like to introduce the advantages of mobile phone games.

In the 21st century, I believe that lots of people have play mobile phone games. For example, Genshin, Honkai: Starrail, Zenless Zone Zero, PUBG Mobile, Honor of Kings, Pokémon TCG Pocket, etc. They are not just mobile phone games, but they are also wonderful, amazing games.

The first advantage of mobile

1. **Advantages** 好處

2. **Century** 世紀

3. **Stress** 壓力

4. **Immediately** 立即

games is that it can relax yourself from stress. Assuming that you have already

studied more than 2 hours, you can relax by playing mobile games. With computer games, you need to turn on the computer and wait a few minutes before you can play. However, with mobile phone games, you can play immediately when you turn on your phone. The faster the time, the faster you can enjoy the game. Moreover, it isn't convenient to bring a computer outside.

Although the above mobile games can also be played on a computer, under most circumstances, it will be more convenient to bring a mobile phone instead of bringing a computer outside for playing games.

Secondly, mobile phone games can give you lots of happiness and memorable memories. For instance, when you are playing mobile phone game with your friends, whether you win or lose the game together, the process is most important when playing with your friends. Subsequently, playing mobile phone games with your friends also improves the relationship between you and your friends.

By the way, even though mobile phone games are appealing and intriguing. Don't over-indulge on mobile phone games.

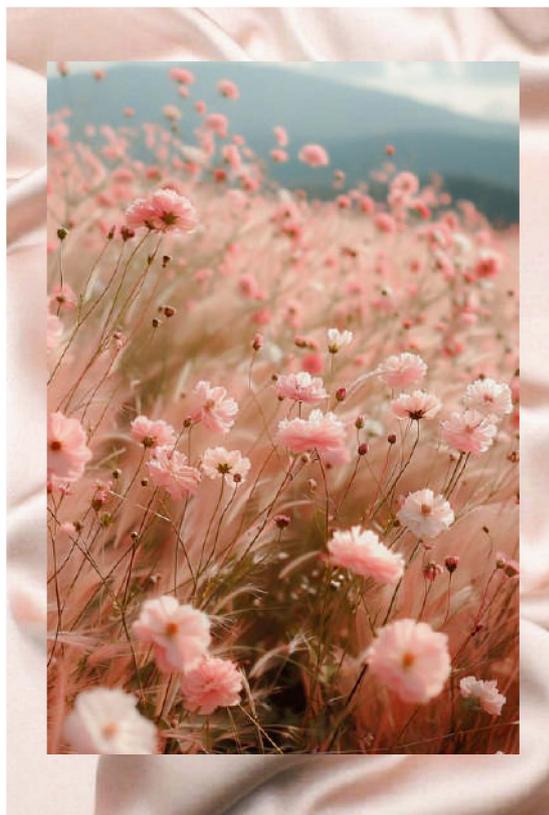

THE FUTURE I WOULD LIKE TO CHOOSE

In the vast expanse of time that lies ahead, the future holds countless possibilities, each like a glimmering star in the cosmic firmament. As I gaze into the uncharted territory of what is to come, I envision a future that is both fulfilling and purpose-driven.

I long for a future where knowledge and wisdom reign supreme. A world where the pursuit of learning is not limited by boundaries or constraints, but is an endless exploration of the unknown. I see myself delving deep into the mysteries of science, unravelling the secrets of the universe, and contributing to the advancement of human understanding.

In this future I choose, compassion and kindness to form the bedrock of society. Where empathy is not just a word but a lived reality, and helping one another is not an act of charity but a natural response. I dream of being part of a community that values the well-being of every individual, working towards eradicating poverty, injustice, and inequality.

-

5D Alisa Guo Chun Tung

The future I desire is also one in harmony with nature. A world where we have learned to tread lightly upon the Earth, respecting and preserving its precious resources. I envision lush green landscapes, clean rivers and oceans, and a balanced ecosystem that sustains all life.

I aspire for a future where art and creativity flow freely, touching the hearts and souls of people. Where music, literature, and the visual arts inspire and unite us, transcending language and cultural barriers.

In this future I would like to choose, I will strive to be a beacon of hope and change. To not only dream but to actively shape a world that is beautiful, just, and full of endless possibilities.

Generative AI -- A **THIEF** in Creator's Clothing

DISCLAIMER: This article rants about AI, plagiarism, and stolen art. There are also some references to deceased people, so watch out for that. Side note, I don't recommend you checking out a certain ad I mention – It's way too horrible and cringy for your precious eyes. X)

AI. Everyone loves using it: ranging from teachers, and especially students, with the most frequently used and famous example being ChatGPT. Now, while ChatGPT is a more familiar topic for everyone, it's a whole can of worms I do not want to open. No. Instead, I want to talk/rant about generative AI for ARTISTS.

For those miraculously not in the know, generative AI is, well, an AI that generates

things based on your prompts. Think of it as like questionable commissions. You've most likely used these programs in computer or DT lessons, even in your own spare time...

Many believe that 'art' is made by AI itself. This is an egregious belief. AI does not make art; you cannot train it to pick up a brush and become the next Picasso. In fact, its so-called art is more like a mishmash of random stolen assets you slapped together in Photoshop. Besides, like

I implied earlier, it's not even original, if you've paid attention in computer lessons, you should know if you've paid attention in computer lessons, you should know that AI requires a large amount of data. This concept extends to generative AI – except the data is stolen.

Besides stealing, what's even more sickening is that some of it is leached off from deceased artists. Yes, you heard/saw me right – DECEASED ARTISTS.

Yes, you heard/saw me right – DECEASED ARTISTS. They never had a say AT ALL. How would you feel if all your hard work – all your blood, sweat, and tears gets laundered, stomped on, ‘fixed’, and flaunted by some weird sicko on the internet?

I assume that everyone has heard of McDonald’s. If you haven’t, then – no offense – you’re living under a rock. Although, in light of recent events, you’re probably better off staying there. For those not in the know, several months ago, the Japanese branch of McDonald’s posted something on Twitter (otherwise known as that one letter yadda yadda) that made everyone drop their jaws – it was a collaboration with a so-called ‘artist’ (heavy emphasis on the quotes) that used...AI.

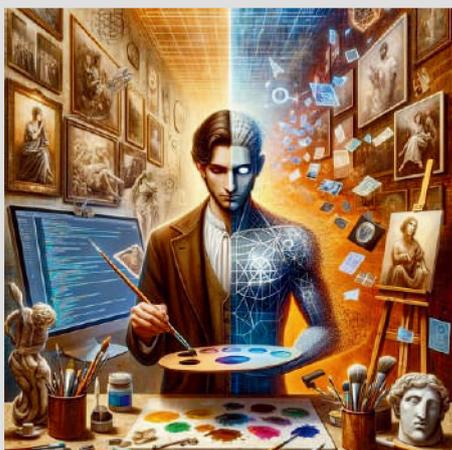

The promotion in question is as bad as you expect, maybe even worse. It just sends chills up one’s spine; it was worse than uncanny valley. It felt like we're living in an AI dystopia. As an ad, it fails in every way possible, and I doubt that people would want to grab another Big Mac after seeing THIS! Simply put, it backfired.

But I digress.

Fortunately, artists have a way to fight back.

Not by holing themselves up in their flat, but with programs such as Glaze. Personally, I have not used it myself, so I cannot guarantee its quality. But it supposedly messes up the AI's ability to leech off of it by adding the wrong tags. That could be useful

Now that you know about this, what is your next course of action? Will you refrain from using generative AI? Maybe scoot over to your computer and delete every single piece of AI junk in a daze? Or just... do nothing? At the very least, think twice before using generative AI.

2. **Plagiarism 剽竊**
3. **Egregious 極壞的**
4. **Dystopia 反烏托邦**

Apple iPhone 16

Apple has recently launched the new iPhone 16, bringing a host of exciting features that aim to enhance user experience and simplify daily life. This smartphone not only boasts a sleek design but also integrates advanced technology that offers significant advantages.

First, the iPhone 16 is equipped with a much faster processor. This upgrade allows apps to open quickly and run smoothly. For students tackling homework or professionals managing tasks, this speed helps them complete their work more efficiently. Being able to multitask without delays means users can accomplish more in less time, reducing stress and boosting productivity.

Second, the camera on the iPhone 16 is remarkable. With a higher resolution, it captures clearer and more detailed photos. The enhanced night mode feature enables users to take stunning pictures even in low-light conditions. This capability is perfect for capturing special moments, whether at family gatherings or during outings. In an age where social media is so prominent, sharing high-quality images helps people connect and express themselves better.

Additionally, the iPhone 16 offers improved battery life. This means users can rely on their phones for longer periods without needing to frequently recharge. This feature is especially beneficial for those with busy lifestyles, allowing them to stay connected throughout the day without interruptions. Moreover, the iPhone 16 is designed with environmental sustainability in mind. Apple uses more recycled materials in its production process, which helps reduce waste and lessen its impact on the planet. This encourages consumers to consider making eco-friendly choices.

In conclusion, the new features of the iPhone 16 provide numerous benefits that enhance everyday life. By combining cutting-edge technology with a focus on sustainability, Apple shows how innovation can improve individual experiences and positively impact the world around us.

The downfall of the gaming industry

Have you recently played any video games? If you haven't noticed, the video games you play are getting worse and worse. Do you agree? There are many topics we want to talk about, but the most major one we will talk about here is the repetitive gameplay from almost all games.

The repetitive gameplay

Quests, the basics of almost all games we love and play, have this element which keeps you active and wanting to keep playing the game. But when developers start running out of ideas, these become a "filler quest", which does not help with the experience of the game or fun for anyone due to its lack of content.

Other than the quests, the games itself also tend to start to get boring day by day. The game mechanics from developers who only want money start adding microtransactions into games, in order to earn more money, which usually reduces the quality of the game.

Microtransactions

Yes, microtransactions, the way developers earn money while also determining how attractive the game is, start going all over the place. Now, we won't say we hate these, but it is starting to get out of hand. The reason for these emerging like crazy is all about one thing - greed. We all love money, right? They also do! So that's how these appear and ruin the fun for us.

New and original ideas are running out

Another up-and-coming phenomenon is games running out of ideas. Don't you feel like the games you have been playing for the past 5 or so years are getting unoriginal? That's normal. It's because there are no more new categories for games to exist. Therefore, not appealing to us anymore. It's always these types of games!

Roblox is a great example of this phenomenon. It depicts every single aspect mentioned above. It has repetitive gameplay, microtransactions, and unoriginal ideas. Basically a perfect mashup for this. There may be hidden gems, but it is unlikely to be

seen on any platform.

So, what do you think? Although most games are getting worse, there may be a few games that may be worth playing.

-
1. Downfall 衰敗
 2. Industry 產業
 3. Repetitive 重複的
-

Our Basketball Dream Team

Do you know why we wrote about this topic? It is because these people are legends in this world. Simultaneously, they have done a lot of meaningful things, such as leading the NBA into a new era and doing a lot of valuable charity work. Therefore, we want to introduce these special players as our all-time dream team.

Stephen Curry

Stephen Curry is widely recognized as one of the greatest shooters in basketball history. Born on March 14, 1988, in Akron, Ohio, Curry was selected by the Golden State Warriors with the seventh overall pick in the 2009 NBA Draft. His revolutionary shooting ability has transformed the game, popularizing the three-point shot and changing offensive strategies across the league. Curry is a two-time NBA MVP, having won the award in 2015 and 2016, and he played a crucial role in leading the Warriors to three NBA championships in 2015, 2017, and 2018. Known for his incredible ball-handling skills, quick release, and exceptional court vision, Curry continues to be a dominant force in the NBA and an inspiration for aspiring basketball players worldwide

Michael Jordan

Michael Jordan, often regarded as the greatest basketball player of all time, was born on February 17, 1963, in Brooklyn, New York. Jordan was selected by the Chicago Bulls in the 1984 NBA Draft and quickly became a superstar, known for his scoring ability, competitive nature, and exceptional athleticism. He led the Bulls to 6 NBA championships in the 1990s, earning Finals MVP honors each time. Jordan's influence extended beyond basketball; he became a global icon and established the Air Jordan brand, revolutionizing sports marketing. After retiring from basketball three times, he returned to lead the Washington Wizards before retiring for good in 2003. His legacy includes 14 All-Star selections, 5 MVP awards, and countless of accolades, solidifying his status as a sports legend.

**Stephen
Curry**

LeBron James

LeBron James, born on December 30, 1984, in Akron, Ohio, is one of the most versatile and accomplished players in NBA history. LeBron was selected as the first overall pick by the Cleveland Cavaliers in the 2003 NBA Draft. Throughout his career, he has demonstrated remarkable athleticism, basketball IQ, and the ability to excel in multiple positions. LeBron has won 4 NBA championships, with victories coming from the Miami Heat, Cleveland Cavaliers, and Los Angeles Lakers, and he has earned Finals MVP honors in each of these championships. He is a four-time NBA MVP and a perennial All-Star, consistently recognized for his outstanding performance on the court.

Kevin Durant

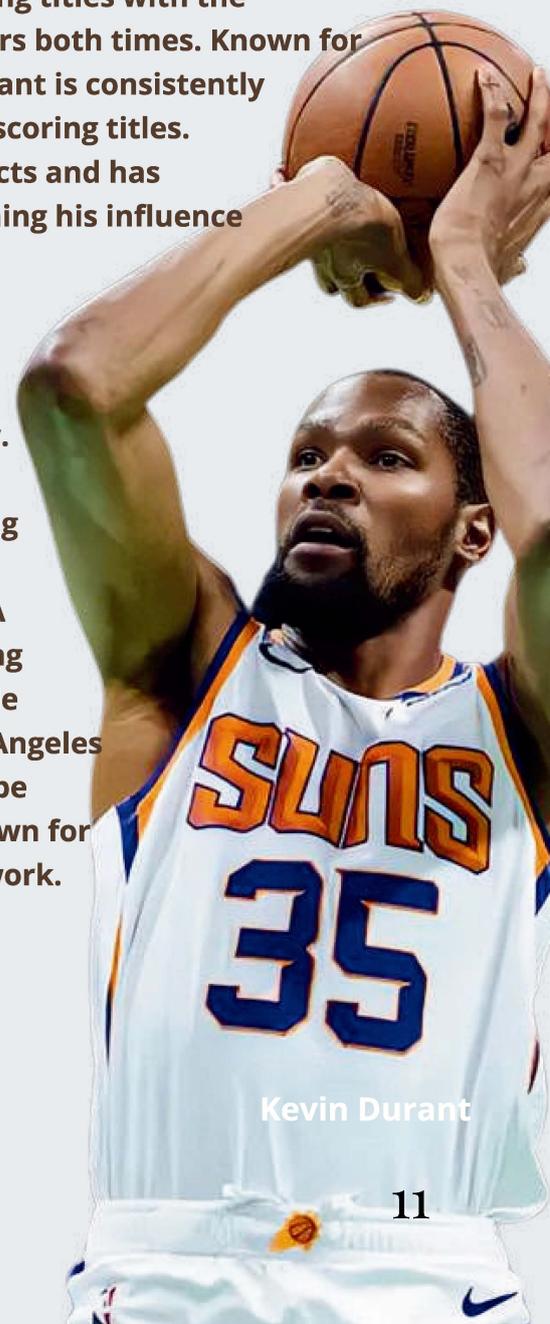

Kevin Durant, born on September 29, 1988, in Washington, D.C., is renowned for his incredible scoring ability and versatility on the basketball court. Durant was selected second overall by the Seattle SuperSonics in the 2007 NBA Draft. Over his career, he has played for the Oklahoma City Thunder, Golden State Warriors, and Brooklyn Nets. Durant is a two-time NBA champion, winning titles with the Warriors in 2017 and 2018, and he earned Finals MVP honors both times. Known for his height, shooting touch, and ability to create shots, Durant is consistently among the league's leading scorers and has won multiple scoring titles. Off the court, he is involved in various philanthropic projects and has pursued interests in business and media, further establishing his influence beyond basketball.

Shaquille O'Neal

Shaquille O'Neal, born on March 6, 1972, in Newark, New Jersey, is one of the most dominant centers in NBA history. Standing at 7 feet 1 inch and weighing over 300 pounds, Shaq's physical presence was unmatched during his playing career. He played college basketball at LSU before being selected first overall by the Orlando Magic in the 1992 NBA Draft. O'Neal quickly made an impact in the league, earning Rookie of the Year honors. Throughout his career, Shaquille O'Neal won 4 NBA championships, primarily with the Los Angeles Lakers, where he formed a legendary partnership with Kobe Bryant. He earned Finals MVP honors 3 times and was known for his powerful dunks, agility for his size, and excellent footwork.

So, do you agree with our Dream Team? Or do you have an alternative team?

1. Legend 傳奇人物
2. All-time 前所未有的
3. Inspiration 靈感
4. Award 獎項

Kevin Durant

Detective Conan

Detective Conan! When you hear this title, does it remind you of that familiar opening scene? I believe that students who have watched this show know that there are many pairs of childhood sweethearts in the story. The author Goshō Aoyama is famous for liking this setting, so below we will introduce a few pairs of childhood sweethearts who are best friends. Let's see which couple is your favorite!

Shinichi Kudo and Ran Mori

The initial story of their childhood romance is revealed through memories from Sakura Class. Thirteen years ago, when Shinichi was a child, he transferred to Ran's kindergarten. While wandering around during lunch break, he happened to see Ran making a new name tag because hers had broken. He noticed that Ran's eyes were filled with tears. He hid his name tag and asked Ran to get one of the same style for himself. Ran was comforted and smiled when she handed it to Shinichi. This also made Shinichi spark a secret love that lasted for 13 years.

Kuroba Kaito and Aoko Nakamori

When Aoko was a child, she met Kaito in the Clock Tower Square, and Kaito talked to her. Aoko revealed that she originally planned to go out with her father, but his father could not accompany her due to other matters.

When she felt sad, Kaito suddenly performed some magic, a red rose to Aoko. They became acquainted

with this gentle comfort.

Aoko returns to

the same place where Kaito recreated the romantic scene, and Aoko was once again deeply moved by it.

Hattori Heiji and Tōyama Kazuha

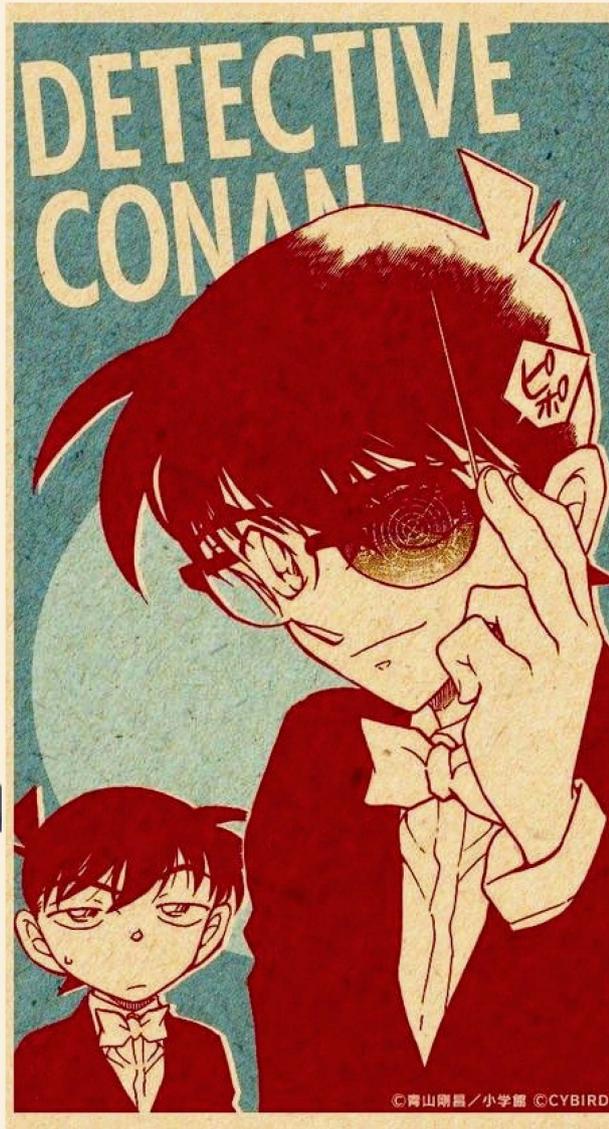

Their childhood connection was revealed for the first time in TV episode 119. In the movie Detective Conan: Crossroad in the Ancient Capital, when Heiji was in a temple 8 years ago, he saw a beautiful girl wearing a kimono outside the temple, she was bouncing a ball and singing under the cherry blossom tree. But when he ran out, only a crystal bead was left on the ground. From then on, he began searching for his first love every time he went to Tokyo. At the end of the movie, Kazuha recalled the songs she used to sing and the kimono she wore to find Heiji. After these deeds, Heiji discovered that his first love was always by his side.

Richard Mōri Kogorō and Kisaki Eri

The story of them was revealed from a friend of Kisaki Eri. In secondary school, Kisaki Eri was the most talented girl, while Kogoro was a troublemaker. The completely opposites fall in love and give birth to a child after they got married. But they began quarreling and separated. But, there are times when they have a tacit understanding as husband and wife, such as having the same stubborn temper, but their love for each other is undoubted

Detective Conan is a show that has grown up with us. Time flies, and I really miss the time when I was a kid watching dramas. As a big fan of this show, I think that when this show ends I will really miss it. I heard that a new movie will be released in 2025. Let's go watch it with someone important together!

Rhythm Games:

Feel the Beat

Did You Know?

- **The most-played rhythm game globally is Osu!, with almost 24 million active players.**
- **Guitar Hero III was the first rhythm game to sell over \$1 billion in revenue.**

The writer likes playing Robeats! on Roblox.

Imagine you're in front of a screen, heart beating, hands are shaking—even holding a neon lightsaber. The music starts and the beat drops. Suddenly, you're not just playing a game, you're a musician!

The Mysteries of Rhythm Games: Passion never ends

Why do rhythm games keep us hooked? Is it the pressing of that impossible combo? The satisfaction of syncing perfectly with the beat? Maybe, it's the way they make us feel like we're part of the music.

Here's the possibility of why rhythm games are so irresistible: Rhythm games test timing and reflexes. They start simple - tap the beat, hit the notes. But soon, surprises that would make even the most pro gamer sweat. Miss a note? The game reminds you with a harsh sound, "Try again, rookie." But when you finally master that impossible song, it feels like you have conquered Mount Everest. Rhythm games don't just let you play music; it lets you feel it. Whether it's the shocking drums of Taiko no Tatsujin (Japan), the soothing piano melodies of Deemo (China), or the EDM beats of Beat Saber (Czech), every note pulls you deeper into the experience. Who knew you'd become a fan of Japanese pop?

Think about what your audience would be interested in and get writing! Again, choose engaging photos and graphics to accompany your words, as these also help catch your audience's eye.

Modern Rhythm Games: Competitions

The rhythm game genre has come a long way, no matter if you're a casual or hardcore player. Friday Night Funkin' has taken the internet by storm, merging rhythm gameplay with aesthetic characters. This game's open-source system has allowed variety mods, turning it into a community phenomenon. Games like Cytus (China), Arcaea (UK), and VOEZ (China) offer complex, emotionally charged experiences. These games blur the line between gameplay and art, with amazing visuals and soundtracks that stay with you long after you've slept! Classics like Taiko no Tatsujin and Rhythm Heaven (Japan) continue to make players addicted. Taiko no Tatsujin continues set up offline competitions in Japan and recruit elite players from all over the world.

The Rhythm Gam Community: Affections among teens

Rhythm games aren't just about playing, they're about teens hanging with people. Teens brought together by interacting with their favorite songs in a way that feels personal and meaningful. In a chaotic world, what gives us a sense of control? Music is the best way to release yourself. Connecting fingers to brain, goodbye stress! Our schoolmate James agrees with this, "Besides sports, playing rhythm games appropriately can save me from study stress. It's not just listening to music; it provides interactions that gives me a lot of energy." He replenishes, "I like Project Sekai (Japan) very much. What can I say? I've met a bunch of new friends online and my positive emotions have enhanced more than ever!"

A Healthy Obsession?

Of course, like any hobby, rhythm games can have their downsides. Teens might spend hours chasing high scores, sometimes sacrificing sleep, homework, or real life social interactions. However, when balanced with other activities, rhythm games can be a healthy way to pass time.

Parents and educators should support teens by encouraging moderation and highlighting the positive aspects of rhythm games. For example, they can: Acknowledge the skills teens develop through these games, such as perseverance and focus. Encourage teens to share their passion of rhythm games with friends or explore related hobbies, like learning a musical instrument (YES, this is practical). Help teens set the limit to ensure gaming doesn't interfere with other responsibilities.

As rhythm games continue to evolve, more and more people will participate. For teens, these games are more than just a pastime, they're a way to find their rhythm, both in the game and in life. And as long as the beat goes on, so will their love for this unique genre. Disclaimer: Don't be addicted to games, appropriate playing is the best way to feel satisfaction.

Mario kart

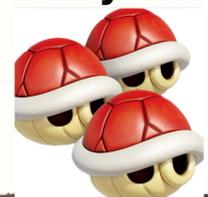

Hi everyone. Do you like playing video games? I believe a lot of boys like playing them. Although I'm a girl, I love playing video games too, I think there are some girls just like me, right? So, today we are going to talk about Switch, which I'm really addicted to. Recently, I love playing 'Mario kart'. I know it was published in 2017, but when I play, I would definitely play for a few hours.

This wonderful game is made by Konno Hideki. It's a game that can play with multiple players. I am going to talk about how to play this game. First of all, all the players can choose the characters and the car that they like. After that, you can choose the mode that you like. When all the players get ready then the game will start.

During the game, you will crash some of the 'question mark boxes'. When you crash it, you will get some props which can attack the opponents or make your car faster. According to your settings, you will play several rounds. And the player who crosses the finish line first will win.

Don't you think it sounds exciting? You can beat your friends in this game. Therefore, you can play this game with the friends who always annoy you. This is the time that you can take revenge. I highly recommend 'Mario kart' because it is easy to play and exciting. It's suitable for all ages, so you can play with your friends or family.

Overcooked!

Another game is "Overcooked!". It's a cooking simulation game developed by Ghost Town Games and published by Team 17. In July 2017 a Nintendo Switch version was released. "Overcooked" is a multiplayer cooperative action game that allows up to 4 players to play the role of chefs, who prepare and deliver food according to guests' orders within a limited time.

The work in the kitchen is very simple, including taking ingredients, cutting vegetables, heating, serving dishes, delivering meals, recycling dirty dishes, washing dishes, etc. Also, there are various mechanisms in the kitchen in the game trying to hinder the player's progress. The ingredient extraction area, food delivery window and tableware washing area are separated into different places, so that players need to spend time moving or passing between these areas. It seems to be easy, but when it comes to actually playing it, it often leaves players in a hurry.

There are various surprises in the game, and there is already a sequel! If you are interested, "Overcooked!" is a good choice.

1. Opponents 對手
2. Revenge 報仇

4. Limited 有限的

Legend of Zelda Breath of the wild

Legend of Zelda Breath of the wild is published by Nintendo Switch in 2017. It is an action-adventure game.

Players in the game control the main character Link, who is having a adventure on Hyrule. Nowadays, a lot of YouTubers still use Breath of the wild to have challenges such as pointcrow, who has 2.4M subscribers .

Breath of the wild has an enormous land that has four tribes that corresponds to the four elements. That is fire, water, light and wind. They all help Link to fight the darkness Ganondorf, and rescue Zelda, the princess.

This is a really fabulous game that has a lot of missions that you can do, if you haven't played this before, this is the best for your next games collection.

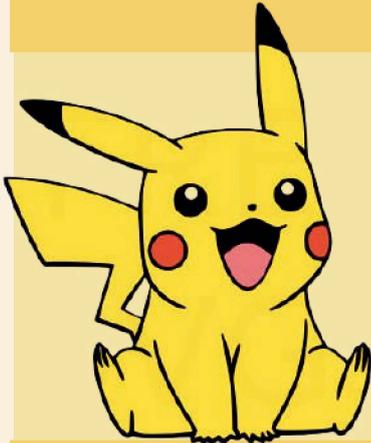

**That's all of our sharing
thanks for reading!**

Pokémon TCG Pocket

You've heard of it, and it's no surprise if you're currently playing it regularly too. With much anticipation, Pokémon TCGP launched on 30th October 2024, and it took the internet by storm. It's currently no.1 on the chart in the app store and sits at 4.8 stars with 16K+ ratings.

Pokémon cards has been a thing for years and yet this is the first successful mobile game depiction of it. The game consists of pulling Pokémon cards, collecting them and battling with them. Simple enough right? Due to timed booster pack opening function, you can play this game quick and easy daily. That being said, seeing the Pokémon TCG community's excitement over pulling certain cards is addictive.

And now I get to experience it too, thanks to the new Pokémon TCG Pocket app. When the Pocket edition of the TCG was announced, there was some discussion online about what the point of it was. The current community already knows and loves the game, so why bother digitizing something they already enjoy in its physical form? But the app isn't designed just for the current community; it's cleverly designed to bring in a new audience and create new fans from people who knows the original game.

So why not give this game a try? Oh and add me when you do try it out (8028263854536483) I'll totally guarantee good EX cards.

Chinese Table Tennis in Paris

As the Paris Olympics approached in 2024, the spotlight was once again on the sport of table tennis, where China has long been a dominating force. This article explores the historical significance, current landscape, and expectations for Chinese table tennis in the Olympics.

China has been a powerhouse in table tennis since the late 20th century. The sport, often referred to as "ping pong," became a symbol of national pride following the establishment of the People's Republic of China in 1949. The country has produced numerous world

champions and Olympic gold medalists, establishing a legacy that is hard to rival.

Since table tennis became an Olympic sport in 1988, China has consistently topped the medal table. The Chinese team has showcased its prowess through a blend of technical skill, strategic gameplay, and rigorous training regimens. Notable athletes such as Deng Yaping, Ma Long, and Liu Shiwen have etched their names in Olympic history, contributing to China's dominance.

Olympics: A Legacy of Excellence

As the Paris Olympics has come and gone, the Chinese table tennis team remains formidable. The national team is known for its rigorous selection process, ensuring that only the best players represent the country.

Ma Long

Chen Meng

Fan Zhendong

Leading up to the Olympics, the Chinese table tennis team engaged in intensive training camps, focusing on both physical conditioning and mental toughness. Coaches utilize advanced analytics to refine techniques and strategies, ensuring that players are well-prepared for the high-stakes environment of the Olympics.

Table tennis is as much about mental fortitude as it is about physical skill. Chinese athletes undergo psychological training to enhance their focus and composure during matches. This holistic approach to preparation is one of the reasons for their sustained success on the international stage.

With the Paris Olympics as a significant event, the expectations for the Chinese table tennis team were sky-high. Analysts and fans alike anticipated a strong performance, particularly in the singles and team events.

However, competition is fierce. Countries like Japan, South Korea, and Germany have made significant strides in table tennis, fielding skilled players who can challenge the Chinese dominance. The emergence of new talent globally means that the Chinese team cannot afford to be complacent.

As the countdown to the Paris Olympics ended, the world watched with bated breath to see how Chinese table tennis will perform. With a rich history of success, a roster of elite athletes, and a robust training regimen, the Chinese team aims to uphold its legacy and continue its reign at the pinnacle of the sport. As the Olympics unfolded, they maintained their dominance in Paris by winning gold in all 5 main categories, thus showing that their spirit of competition is as fierce as ever.
